SUMMARY

Applying for DevOps Engineer. Relevant strengths: Azure DevOps, Azure DevOps Pipelines, DevOps, AWS (EC2, CI/CD & Release Management: Jenkins, Infrastructure as Code (IaC): Terraform. - DevOps Engineer with over 5+ years of progressive experience designing, building, and deploying scalable dis- tributed systems and cloud infrastructure across banking, manufacturing, and healthcare domains with proven ability to leverage full-stack development skills to bridge development and operations for enterprise-grade applica- tions. - Expert in multi-cloud environments including AWS (EC2, S3, RDS, Lambda, EKS, CloudFormation, CloudWatch, IAM, Route53, VPC) and Azure (VMs, AKS, App Services, Azure DevOps, Azure Functions, Cosmos DB) with hands-on experience in hybrid cloud architectures, disaster recovery implementations, and cloud cost optimization. - Highly proficient in Infrastructure as Code (Ia

SKILLS

Azure DevOps, Azure DevOps Pipelines, DevOps, AWS (EC2, CI/CD & Release Management: Jenkins, Infrastructure as Code (IaC): Terraform, Containerization & Orchestration: Docker, Kubernetes, Docker Swarm, Terraform, AWS Systems Manager, AWS SNS, AWS Secrets Manager, S3, RDS, Lambda, EKS, CloudFormation, CloudWatch, IAM, Route53, VPC, Fargate, ECS, CodeBuild, CodeDeploy), Azure (VMs, AKS, App Services, Azure Functions, Logic Apps, Cosmos DB, Azure, Storage, Application Insights), GCP (Compute Engine, GKE, Cloud Storage, Cloud Run, Cloud Functions)

EXPERIENCE

DevOps Engineer Dallas, TX

Quest Diagnostics May 2024 - Present

- Application Insights), Terraform , Ansible, Jenkins, GitHub Actions, ArgoCD, Helm, Docker, Kubernetes,
- ALB/NLB, VPC), Azure (AKS, App Services, Azure DevOps Pipelines, Azure Functions, Cosmos DB, Key Vault,
- Tech Stack & Environment: AWS (EC2, EKS, RDS, Lambda, S3, CloudFormation, CloudWatch, IAM, Route53,
- Prometheus, Grafana, ELK Stack, Kibana, SonarQube, Snyk, Aqua Security, Akamai CDN, AWS CloudFront,
- Spring Boot microservices, PostgreSQL, DynamoDB, Redis, Linux (Ubuntu, RHEL), HIPAA compliance frameworks,

HashiCorp Vault

- Designed and maintained comprehensive CI/CD pipelines using Jenkins and Azure Pipelines for automated
- Built and managed high-availability Kubernetes clusters (EKS/AKS) for containerized healthcare applications,
- testing and deployments, enabling continuous delivery for critical healthcare applications with zero-downtime
- deployments across multiple environments using blue-green and canary deployment strategies.
- ensuring HIPAA compliance, scalability, fault tolerance, and implementing Pod Disruption Budgets for graceful

workload management in patient data processing and medical record systems.

- Automated provisioning of AWS and Azure infrastructure with Terraform and Ansible, achieving infrastructure
- consistency and reducing manual effort by 80% while maintaining infrastructure drift detection, state management,

and automated remediation processes using sentinel policies.

- Configured comprehensive monitoring solutions with Prometheus, Grafana, and ELK Stack for real-time
- system health and performance tracking, implementing multi-cluster dashboards and healthcare-specific alerting

rules with intelligent thresholding for anomaly detection.

- Implemented advanced resiliency patterns including circuit breakers, bulkheads, retries with exponential
- backoff , and automated failover mechanisms to improve system reliability, achieving 99.99% uptime for critical

healthcare services during peak loads.

- Strengthened application security and compliance by integrating IAM policies, SonarQube/Snyk security checks,
- container image scanning with Aqua Security, and OWASP vulnerability assessments directly into CI/CD pipelines,

ensuring HIPAA and healthcare regulatory adherence.

- Improved system observability by implementing Prometheus metrics and Grafana dashboards with custom
- instrumentation, resulting in 45% reduction in Mean Time To Resolution (MTTR) and enabling proactive

identification of performance bottlenecks and resource constraints.

- Provisioned and managed 300+ highly available EC2 instances using Terraform and CloudFormation with
- auto-scaling groups, Application Load Balancers, and multi-AZ deployments for disaster recovery, business

continuity, and healthcare data center failover.

- Automated deployment workflows for 200+ containerized microservices using Kubernetes, Docker, Ansible,
- and GitHub Actions, streamlining CI/CD processes, reducing deployment time by 60%, and implementing automated

rollback on deployment failures.

- Converted legacy AWS infrastructure to serverless architecture using AWS Lambda, API Gateway, and Dy-
- namoDB, deploying infrastructure via Terraform, reducing operational overhead by 40%, improving auto-scaling

capabilities, and enabling event-driven healthcare workflows.

- Implemented SSL/TLS configuration with Akamai CDN and CloudFront for S3 distribution, custom cache
- policies, and geo-routing to ensure secure data transmission and optimized content delivery for healthcare applications

across global regions.

- Established GitOps workflows using ArgoCD with pull request workflows, implementing declarative applica-
- tion deployment, automated synchronization, and sophisticated rollback capabilities for production healthcare

EDUCATION

University of North Texas May 2025
Masters in Information Systems & Technology Denton, TX

ADDITIONAL

- AWS Certified Solutions Architect - Associate - Amazon Web Services
- Docker for DevOps Engineers - LinkedIn Learning
- Continuous Integration & Continuous Deployment (CI/CD) with Jenkins - Coursera
- Terraform on AWS for DevOps Engineers - LinkedIn Learning
