SUMMARY

Applying for DevOps Engineer. Relevant strengths: DevOps, Azure DevOps Pipelines, Docker, Kubernetes, Cloud Platforms: AWS (EC2, CI/CD Tools: Jenkins. - Python Automation Engineer with 5+ years of experience in test automation framework development, migration, and optimization across embedded systems, healthcare, and enterprise domains with strong expertise in Python/Pytest and Robot Framework. - Expert in Python automation with Pytest including fixture design, parametrization, markers, hooks, conftest configurations, and building scalable test architectures for complex embedded and UI automation scenarios. - Extensive hands-on experience with Robot Framework including keyword libraries, resources, variables, test structures, and managing large keyword repositories (1000+ keywords) with proven migration expertise to Python/Pytest. - Strong experience in QNX OS, POSIX systems, and Hypervi

SKILLS

DevOps, Azure DevOps Pipelines, Docker, Kubernetes, Cloud Platforms: AWS (EC2, CI/CD Tools: Jenkins, Python, Bash, Shell Scripting, Groovy, JavaScript, SQL, YAML, JSON, XML, Test Frameworks: Pytest, Robot Framework, unittest, Selenium, Appium, TestNG, Cucumber, Behave, Hypothesis, Automation Tools: Pytest (fixtures, markers, hooks, plugins), Robot Framework (keywords, resources, variables), WebDriver, Playwright, Operating Systems: QNX (POSIX), Linux (Ubuntu, CentOS, RHEL), Windows, macOS, Embedded RTOS

EXPERIENCE

Python Automation Engineer

CommonSpirit Health May 2024 - Present

- Tech Stack: Python, Pytest, Robot Framework, Selenium, Appium, AWS (EC2, S3, Lambda), Jenkins, GitLab CI/CD, Azure

DevOps, Docker, Kubernetes, PostgreSQL, Redis, Allure Reports, JIRA, Git

- Architected and enhanced Python/Pytest automation frameworks for healthcare application testing, implementing fixtures,

parametrization, markers, and custom plugins to support 500+ automated test cases.

- Led migration activities from Robot Framework to Python/Pytest, converting 800+ RF keywords to Python equivalents

while maintaining backward compatibility and keyword reuse models for hybrid execution.

- Built comprehensive wrapper layers, fixtures, and reusable automation components including custom pytest plugins, conftest

configurations, and shared utilities reducing test development time by 60%.

- Managed and optimized large keyword repositories (1000+ keywords) in Robot Framework, implementing keyword organiza-

tion, documentation standards, and resource file management for enterprise-scale testing.

- Implemented UX/UI automation using Selenium and Appium with page-object patterns, creating maintainable test suites

for web and mobile healthcare applications with cross-browser/cross-device support.

- Designed modular test architecture with page-object/page-keyword patterns, implementing factory patterns, dependency injec-

tion, and test data management for automation maintainability.

- Independently debugged cross-layer automation issues involving Python, Robot Framework, and device tools, implementing

comprehensive logging and diagnostic utilities for rapid issue resolution.

- Integrated automation frameworks with CI/CD systems (Jenkins, GitLab CI/CD, Azure DevOps) enabling automated test
- execution, parallel testing, and continuous quality validation with 95% pipeline reliability.
- Optimized hybrid execution flows involving both Pytest and Robot Framework assets, enabling seamless interoperability and

keyword reuse across framework boundaries.

- Configured AWS cloud infrastructure for test automation including EC2 instances for test execution, S3 for artifact storage, and

Lambda functions for serverless test orchestration.

- Implemented test reporting and analytics using Allure Reports, pytest-html, and custom dashboards providing real-time visibility

into test execution metrics and quality trends.

- Established Git branching strategies and code review processes for automation codebase, enforcing coding standards and best

EDUCATION

University of North Texas May 2025
Masters in Information Systems & Technology Denton, TX

ADDITIONAL

- ISTQB Certified Tester - Foundation Level - International Software Testing Qualifications Board
- AWS Certified Solutions Architect - Associate - Amazon Web Services
- Python for Test Automation - LinkedIn Learning
- Robot Framework Test Automation - Udemy
